THE TRANSPORTATION CENTER at Northwestern University began its formal program in the autumn of 1956. Since then it has assumed progressively greater importance as an independent, national center for education, basic research, and service to the transportation industry and the nation.

The Center's research program is planned to provide a better understanding of transportation, its relationship to the economy, and its contribution to national economic growth. In pursuing these objectives, the research program draws upon authorities in various sciences at Northwestern University and from other institutions throughout the nation.

The educational program is concerned with developing and encouraging the interest of outstanding scholars at Northwestern and other universities in applying their disciplines to the field of transportation. In addition to the purely academic program, the Center is concerned with presenting the results of university research and the skills of various disciplines to executives in the industry through a series of short courses and conferences.

Activities of the Transportation Center are guided by a national Advisory Committee of 31 business and community leaders. Over 100 companies in air, highway, oil, pipeline, rail, and water transportation, and in general business, contribute to the support of the Center.
